

AIRcable Host XR3™ Data Sheet

Extend your Bluetooth Marketing Campaign Range with the AIRcable Host XR3.

Key Features:

- Bluetooth 2.0 compatible
- Up to **150m** external antenna included
- Standard USB connector
- Works with Windows, Linux, and Mac OS X
- No external power needed
- Aluminium case for reduced interference and increased sensitivity
- Extends the range of your existing Bluetooth devices!
- Built on AIRcable XR long-range technology

The AIRcable Host XR3, equipped with an extremely powerful, **highly sensitive Bluetooth radio receiver**, can achieve an unparalleled range.

You can expect to achieve a range of up to 150m with the Host XR3 straight out of the box.

Given its high sensitivity, it can **extend the range of weaker Bluetooth devices** like mobile phones considerably. With most other adapters only capable of a maximum range of 40 metres, no other Bluetooth adapters come even close.

Plus, this long-range Bluetooth transmitter connects to any computer with a Bluetooth connection and can handle virtually any Bluetooth profile available. Uses include standard data, streaming data, headset communication (like Skype calls) and stereo headphone communication.

With the AIRcable Host XR you can also extend the range of communication from your PC to other Bluetooth devices.

The AIRcable Host XR is supplied with a USB power lead.

The only long-range Bluetooth USB Adapter. █
